FORTETUB

The Fortetub double layer design creates a microclimate for the plant, and a flared rim protects against damage and windburn.

Product Sheet

FORTETUB TREE SHELTER

The Fortetub range of tree shelters are firmly established within leading forestry and landscaping organisations in the UK.

BENEFITS

- For use in Forestry, Landscaping and Agriculture.
- Available in three sizes; 60cm, 75cm, 120cm.
- Diameters between 7.5cm and 10cm.
- Available in three types; Smooth, Micro-Hole and Shaded Mesh.
- Nests of 4 or 5 dependent on size.
- Delivered in bags, so carrying them to site is easy.
- 250 per bag (60cm and 75cm).
- 140 per bag (120cm).

Talk to your local East Riding Horticulture Area Manager about our Fortetub Tree Shelters or call our head office on 01904 608157.

Fortetub guarantees a better and faster growth, since it avoids the ramifications of the plant causing inside the development and elevation of the trunk. In addition, it protects it from both rodents and other older animals.

SMOOTH TUBE

Recommended especially for plantations that require high treatment with herbicides or other chemicals.

MICROPERFORATED TUBE

It is ideal for all types of plants due to the conditioning that occurs inside thanks to transpiration and the controlled microclimate it causes.

SHADED MESH

Due to its high ventilation, it is used in forest plantations in which the weather conditions are extreme.
