Product Sheet

ENGAGE ACCELERATE

Engage Accelerate is a highly optimised and long lasting dew dispersant that gives an extended effect. Rapid removal of rain, dew and guttation fluid leads to drier sward which can significantly reduce the potential for fungal turf diseases as well as aid playability of putting surfaces. Less labour time required to switch the greens dry on a morning.

Highly effective at getting water through thatch layers. Usually you can see the benefits on your turfgrass for 10-14 days after application. Engage Accelerate is cost effective for use on fairways, landing areas as well as collars, greens and tees. Apply monthly from October onwards or when the weather demands it.

Available in 5L. Talk to your local East Riding Horticulture representative about Engage Accelerate and further products from our Engage Range.

Good to know...

Switching has long been promoted as good cultural practice to keep the sward drier and help reduce incidence of fusarium patch, however switching will only remove dew and guttation fluid at the time it is done and not stop it building back up. A dew dispersant can stop the build-up of rain, dew and guttation fluid day and night for extended periods. Trials of a new breed of highly effective dew dispersant's have shown dramatic effects on reducing incidence of fusarium patch.

Engage Accelerate application

For best results apply as a standalone spray onto dry turf. Dissolve 5 litres of Engage Accelerate in 300 – 450 litres water and spray apply to 1 hectare of greens. Can be used mid-August till end of spring, applied every 10-21 days. Do not apply immediately ahead of heavy rain.

Zone:	Greens/Tees/Sports Pitches	Zone:	Bowling Greens
Size:	5L	Size:	750ml
Water Volume:	300-450 litres	Water Volume:	45-68 litres
Area:	1 hectare	Area:	1500m ²
Frequency:	Every 10 to 21 days as required	Frequency:	Every 10 to 21 days as required
